Address

Villa Angela, Balulang,
Cagayan de Oro City

Technical Skills

Programming Languages

TypeScript, JavaScript, Python, SQL
C++, Java, PHP

Frontend

React, Next.js, React Native, HTML, CSS,
Tailwind CSS, Vite

Backend

Node.js, Express.js, RESTful APIs, API
Integration, Socket.IO

Databases

PostgreSQL, Supabase, MongoDB, Neon

AI & Machine Learning

RAG, AI Agents, Function Calling, Vector
Databases, Predictive Analytics, OpenAI API,
Gemini API

Security

RBAC, Authentication, Authorization,
Row-Level Security (RLS)

Tools & Cloud

Git, GitHub, Postman, VS Code, Vercel

Angelo Reychie Alejo

Summary

Full-Stack Developer specializing in building and improving web and mobile systems from frontend to backend. Skilled in developing features, fixing issues, managing databases, integrating APIs, and improving system performance. Adaptable, quick to learn, detail-oriented, and strong in problem-solving, communication, teamwork, and handling changing project requirements.

Work Experience

Full-Stack Developer

Dec 2025 - Sep 2026

Compassionate Home Health Services

Pontiac, Michigan, USA

- Developed and improved healthcare applications across frontend and backend using TypeScript, Next.js, Node.js, Python, Supabase, and Vercel, including APIs, database features, access controls, workflow automation, third-party integrations, and dashboards.
- Implemented AI and machine learning capabilities for healthcare workflows, including intelligent assistants, clinical analysis, predictive functionality, data retrieval, and secure integrations between applications.
- Built AI-assisted development tools with isolated testing environments and real-time previews, while collaborating with developers and team members to fix issues, improve features, and deliver reliable solutions for business and clinical requirements.

Projects

2024-2025

University of Science and
Technology of Southern
Philippines

Ne-Attend

- Automated attendance monitoring system for students and instructors in Google Meet.
- Built using the MERN Stack and Socket.IO for real-time data.

2025

University of Science and
Technology of Southern
Philippines

USEAPP

- Real-time attendance monitoring and payroll processing system with a mobile app using React, PHP, and Socket.IO.

2025

University of Science and
Technology of Southern
Philippines

Credit Card Fraud Detection

- Machine learning system that detects fraudulent and non-fraudulent credit card transactions using Logistic Regression, Random Forest, and SVM.

Education

S.Y. 2021-2022

Balulang National High School
Senior High School

S.Y. 2025-2026

University of Science and Technology of Southern Philippines
College
Bachelor of Science in Information Technology

Achievements

- Developed a **Real-Time Attendance Monitoring System for Online Conferences** as a **Full-Stack Developer**.
- Developed a **Machine Learning Model for Fraud Detection** for an ML project.
- Dean List Awardee - **Academic Year 2022-23**.
- Dean List Awardee - **Academic Year 2023-24**.
- Developed a **Real-Time Attendance Monitoring and Payroll Processing System** as **Full-Stack Developer**
